

## Finding Latitude/Longitude Coordinates Using Google Maps

1. Open an internet browser and go to <http://maps.google.ca>.
2. Once you have zoomed to the location you require information for, left click on that location. You will see the latitude and longitude coordinates populate on the right.

Note: If the coordinates do not appear, right click, select “What’s here?”.

Including as many decimal points as there are provided will help ensure accuracy (minimum 5 required by Sask 1<sup>st</sup> Call).
